

BUG REPORT

BUG-2077

Navigation menu overlaps hero text on iPhone (mobile layout)

Client	Pulse Fitness Studio (fictional demo client)
Environment	Safari on iPhone 15, iOS 18
Date reported	September 30, 2026
Reported by	QA, mobile layout review
Status	Fixed and verified
Severity	MEDIUM

Summary

On iPhone-sized screens the full desktop navigation stayed visible instead of collapsing into a hamburger menu, and it overlapped the hero headline so the headline text could not be read.

Steps to Reproduce

1. Open the Pulse Fitness Studio homepage in Safari on an iPhone (or device toolbar at 390px wide).
2. Observe the top of the page without scrolling.
3. Try reading the hero headline text behind the navigation links.
4. Rotate to landscape and back to portrait, then reload.

Expected Result

Below 768px the navigation collapses into a hamburger icon, and the hero headline is fully readable with clear spacing.

Actual Result

All six nav links rendered on top of the hero headline. The headline was unreadable, and tapping links was unreliable because the tap targets overlapped the hero button.

Fix Applied

Fixed the media query breakpoint so the hamburger menu activates at 768px as designed, moved the mobile nav into a slide-in panel, and added spacing so the hero content always clears the header.

Retest Result

PASS

Verified on iPhone 15 (Safari), Pixel 8 (Chrome), and desktop widths from 320px to 1440px. Hamburger appears below 768px, hero text is clear at every size, and all nav links are tappable.
